

NOX Converters

Get the *heat* out!

On a good day an internal NOx converter runs at 316 Degrees Centigrade. That means that your PMT cooler has to work against that temperature and that means shortened analyzer life. External Converter minimizes down time, simple to replace, does not change flow path, and installation does not require a gas audit.

Molybdenum based converter
Operating temperature > 316C
Flowrate > 2lpm
Wetted materials: SS, Teflon, high purity Mo 99.5
Response time: > 10 sec
Service Life > 15000ppm/hrs
Manual bypass on all units
One year warrantee on non-consumables

Base Price **\$2100.00***

*shown with optional status bits

Also available with SS317L High temp converter
